

# The Hypothyroidism Treatment Satisfaction Questionnaire (Change): ThyTSQc

For the past few weeks/months you have been taking part in a thyroid treatment study. It is possible that your treatment was changed when the study began. Treatment includes blood monitoring and any medication. We would like you to tell us how you feel about your current treatment. The following questions ask you to compare it with the treatment you used before the study began. On the scale below each question, please circle a number from 3 (e.g. much more satisfied now) to -3 (e.g. much less satisfied now). If you haven't noticed any change, please circle the '0'.

1. How satisfied are you with the current treatment for your underactive thyroid?

much more satisfied now      3    2    1    0    -1    -2    -3      much less satisfied now

2. How well do you feel the treatment is working?

much better now      3    2    1    0    -1    -2    -3      much less well now

3. How convenient have you found your treatment to be recently (e.g. remembering to take the medication, getting prescriptions)?

much more convenient now      3    2    1    0    -1    -2    -3      much less convenient now
