

Volunteers needed

Development of two new questionnaires for people with cancer: the Cancer Treatment Satisfaction Questionnaire (CancerTSQ) and the Cancer Symptom Rating Questionnaire (CancerSRQ)

What are we doing?

We are developing two new questionnaires to measure satisfaction and dissatisfaction with **cancer treatment** and the presence and impact of **symptoms of cancer and its treatment**.

Why are we doing it?

We know cancer and its treatment can impact on peoples' lives in lots of different ways. These new questionnaires will help health professionals **identify the most promising new treatments** for cancer and make the **best of use of existing treatments in routine care**.

What happens next?

If you volunteer, we may invite you to **take part in an interview via telephone or video-link**. We will ask about your experience of cancer treatment and any symptoms you have had. We will also ask you to complete and **provide your views on draft versions of the CancerTSQ and CancerSRQ**. If you do not wish to take part in an interview, or if we have enough volunteers, we may ask you to **complete the questionnaires** only.

Who do we need?

- We need people who:
- are **18** years or over
 - are currently undergoing treatment or have had **treatment for cancer** in the past 2 years
 - have **English** as a first language

How can I take part?

If you are interested in knowing more about the study, or if you would like to take part, please contact the Health Psychology Research (HPR) team.
